Buy with confidence!

All Rhino EQ-300 Whole House Water Filtration systems come with a 100% satisfaction guarantee for 3 full months, and a 1-year manufacturer's warranty!

If for any reason you are not happy with your Rhino EQ-300, call us within 90 days of delivery, and not only will we give you a 100% refund, we will even pay for the return shipping. Our expert customer service is just a toll-free call away!

Supreme Quality

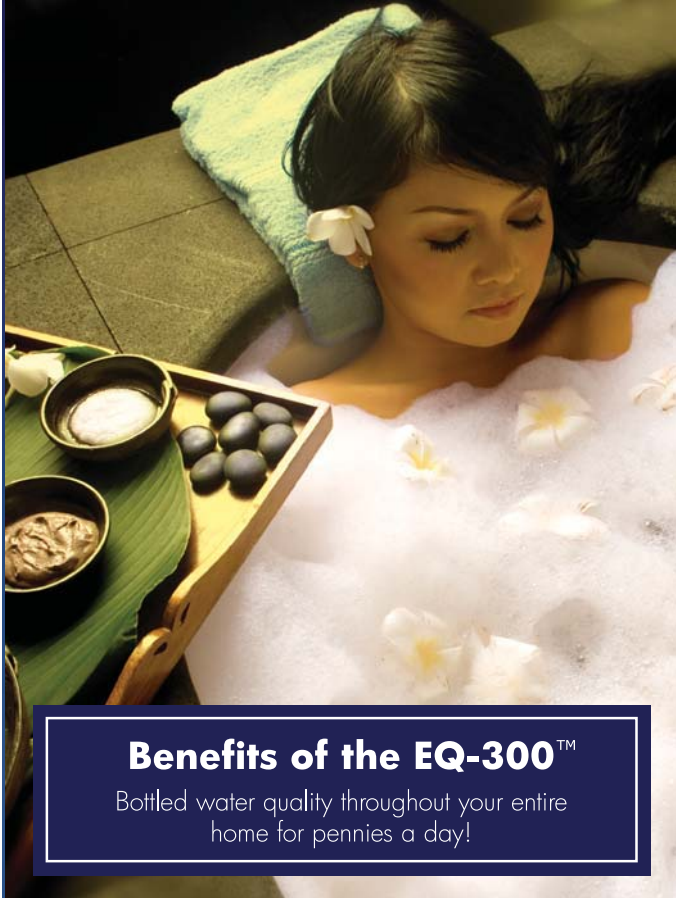

Unlike most other water filtration products, the Rhino system was designed to exceed government and industry standards. We believe, and research has shown, that there are no safe levels of toxic synthetic chemicals in our water.

A quality home water treatment appliance is the best investment we can make in our family's health.

Benefits of the EQ-300TM

Bottled water quality throughout your entire home for pennies a day!

- **Virtually no maintenance**
- **Greatly reduces indoor chlorine vapors**
- **No electricity costs**
- **Lengthens life of plumbing fixtures & appliances**
- **No back-flushing**
- **No wasted water**

A 7-gallon-per-minute, on-demand flow rate means no pressure drop in a home less than 3,200 sq. ft. If your home is larger than 3,200 sq. ft., a second unit is required to provide sufficient pressure throughout the home. The flow rate increases to 14 gallons per minute and the unit is installed in parallel or a manifold setting. Two systems will also increase the lifespan of the system to 600,000 gallons (six years).

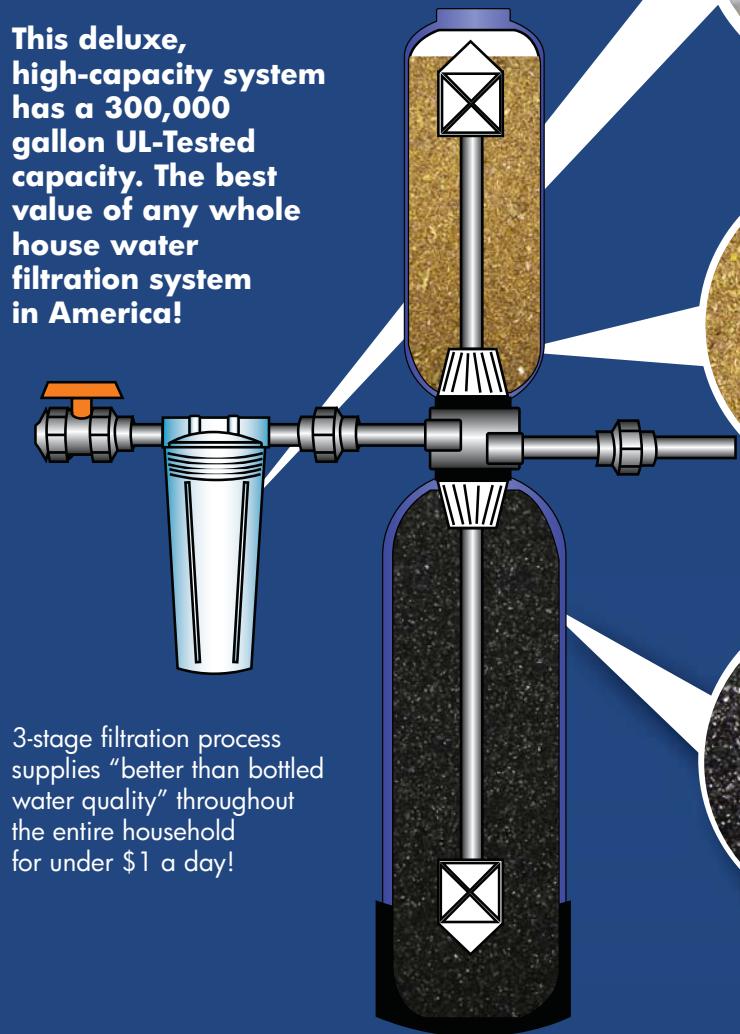

RHINO™ EQ-300 WHOLE HOME SYSTEM

Whole House Water Filter
ANSI/NSF 42
3JRY

System tested and certified by Underwriters Laboratories to NSF/ANSI Standard 42 for chemical reduction of chlorine and taste and odor as verified and substantiated by test data.

This deluxe, high-capacity system has a 300,000 gallon UL-Tested capacity. The best value of any whole house water filtration system in America!

3-stage filtration process supplies "better than bottled water quality" throughout the entire household for under \$1 a day!

Stage 1:

Is a 5 micron sediment prefilter for the removal of rust, dirt and microscopic particles that cause cloudiness and scaling from tap water.

Stage 2:

Is a blend of KDF-55, a copper-zinc oxidation media for the removal of chlorine, and a crushed mineral filter stone. By removing the chlorine and preconditioning the pH, this stage allows maximum performance for the final and most important stage.

Stage 3

Uses high grade activated carbon for final reduction of chlorine and other chemicals common in tap water.

Comes complete with main filter unit, pre-filter, installation kit, shut-off valve and required hardware. The Rhino requires only 45 in. of vertical clearance and has a diameter of 10 in. at the base. Typical installation is 1.5 to 2.5 hours by a licensed plumber and is usually done in your basement, garage, or water heater closet. The main filter unit is easily replaced (no plumber needed) every three years.

According to the U.S. EPA, every home in America has an elevated level of chloroform gas present due to the vaporization of chlorine and other chemicals from tap and shower water. Chlorine vapor is a suspected cause and an irritant of respiratory problems such as asthma, bronchitis and allergies. Filtered water will benefit every aspect of your family's health. This is the most valuable and beneficial home appliance you can own!
